

SubnetManager

std::enable_shared_from_this< LocalSubnetManager >

LocalSubnetManager

```
classDiagram
    class SubnetManager
    class LocalSubnetManager
    LocalSubnetManager --|> SubnetManager
```

The diagram illustrates a class hierarchy where LocalSubnetManager inherits from SubnetManager. SubnetManager is the base class, and LocalSubnetManager is the derived class. The inheritance is indicated by a solid line with an open arrowhead pointing from LocalSubnetManager to SubnetManager. Additionally, SubnetManager is associated with the C++ standard library feature std::enable_shared_from_this< LocalSubnetManager >, which is shown in a separate box to its right.
